[Autodesk Advance Steel provides you with the default prefix profile that it uses while numbering the parts and assemblies. If required, you can edit the default prefix settings or create a new prefix profile and define its settings to be used for numbering. For example, in most cases, the way the steel is numbered while detailing the building model is different from the way it is numbered...](#)

[In Autodesk Advance Steel, the Model Check tool is used to check the modeling errors in the selected structural objects. If you do not select anything before invoking this tool, the entire model will be checked. The results of this check are displayed in the Model Check window in a tabular format, as shown in the following figure.](#)
